

# Intro To ChatGPT

- **What is it...** An AI language model trained on a massive amount of text data that generates natural language responses in a conversational style. (Aka a magic genie)
- **Future of it...** This tool and others like it will be seamlessly integrated into our computers and smartphones, eventually becoming a full-time personal assistant custom tailored to you.
- **Main benefits...** Saving time, saving time, saving time. But also, extending into fields outside your expertise, quickly get ideas off the ground, and reiterate much more effectively.
- **Main Types of Outputs:**
  - **Synthesizing Info** - Summarize large amounts of content in a concise way.
  - **Content Creation and Copy** - Generate brand new content for a specific topic and purpose.
  - **Learning and Research** - Get questions answered for extremely specific needs.
  - **Coding** - Generate code, info on programming concepts and APIs, and debugging.
